Summary

I am an enthusiastic geek who plays almost any technologies out there, currently focusing on VanillaJS, NodeJS, Angular, Vue, ExpressJS, and Ionic. I do web and mobile design and development from scratch up to the hand of the users.

Experience

German World Club FZCO – Solo Full Stack Web Developer
January 2023 - Current

Hoody - Senior Full Stack Developer
December 2021 – December 2022

Remotodojo - Senior Full Stack Developer
September 2021 – October 2021

Panteum Labs – Javascript Developer
December 2020 – March 2021

RapidPass.ph (DCTX) – Project Manager
March 2020 – April 2020

FPT Software Ph – Software Developer
July 2017 – July 2019

CML Mopro Philippines, Inc. – Web Builder
May 2017 – June 2017

Accenture – Remote Desktop Support Specialist
May 2016 – May 2017

Advanced World Systems (AWS) – Incubated
November 2015 – March 2016

LaunchLabs – Web Developer
April 2015 – October 2015

Education

BSIT - University of Cebu, Banilad,Cebu, Philippines
(June 2011–March 2015)
Recognitions: IBM Scholar, CHED scholar, Working Student, Computer Studies Department Representative

Science and Technology Education Center, Danao City, Philippines
(2007-2011)
Scholar

Skills

Vanilla JS, Angular, Vue, Ionic, JestJS
ExpressJs, NodeJs, Ruby on Rails
MongoDB, MariaDB, MySQL PostgreSQL
Git, SVN, Github, Jira, Monday.com CI/CD,
Apache, PM2, FTP, SSH Filzezilla, Postman,
Slacks, Figma. OS: Android, Windows, Linuxl

Public Projects

GEC Various Pages – Career Link, Download Link, Events Link
Various websites for Career Hiring page, Download App page, Event registration, etc.

IFZA Reward Download Page – Link
International Free Zone Authority Download Landing Page for their Rewards app system

White Reward – whitereward.com
A quick built website from scratch using Vue under GEC

Hoody Blog – hoody.com/privacy-hub
Created blog page for hoody including CMS with Content Editor WYSIWYG.

Hoody App – hoody.com
Co-coded the front-end of desktop application
(The desktop application, not the website)

RapidPass.ph – Profile Reference
Town border passes for Covid19 response in the capital of the Philippines handed over to the goverment

LTO Vehicle Franchising
Government Registration for Franchising Vehicles – Guihulngan, Negros Oriental

Conducted Seminars

Internet of Things
University of Cebu – LM branch (2019)

Ionic: Cross Platform
University of Cebu – LM branch (2018)

VueJs
DevCon – The Company (2018)

Angular
DevCon – Amihan Global Strategies (2018)

Variety of Tech Stacks
Tech Talk – FPT Software Ph (2018 – 2019)

4 Various internal seminars conducted
(Git, Angular, Vue, Express)

Certifications

M042: New Features and Tools in MongoDB 4.2
MongoDB University (2020)

M001: MongoDB Basics
MongoDB University (2020)

PHIL – IT GCE
University of Cebu (2015)

Job Description

German Emirates Club - Startup
Update exiting German Emirates Club website existed and developed since 2007 using PHP, Apache and MySQL and development stopped on 2014.
Development responsive website for client for hero page and for lead generation using VueJs and alternatively VanillaJs, HTML5, CSS3, and JS-ES6
White Reward - A brand by German Emirates Club for reward system.

Hoody
Web Security like VPN but not really a VPN.
Create user interface for cross platform application following each design per pixel designed in Figma using HTML, CSS, Vanilla JS, ported to Tauri, rust programming language, viewed as native WebView.
Create Blog website viewable to public using Pug, Handlebars, HTML, CSS, Vanilla JS
Create Blog Editor for blog writters to input blogs by constructing article tables, saving data input, uploading of avatar and create drag and drop features in plain Vanilla JS, coding everything in one index.html,

Remotodojo
Helpe with the CTO with the development of all projects under the company relating to IT/Software.
Gathering and analyzing business requirements to fix existing application using MEAN.
Assist junior developers with coding, debugging, and deploying and guide them with coding patterns.
Build from scratch an online school application using Angular and Tailwind.
Build showcase website application for our own company considering loading speed by taking advantage of lazy loading and caching.

Panteum
Build a whole ecosystem from blockchain technology for End Users using highly secured stack and primitive technologies (no framework) like vanilla javascript, rust, build own framework for front-end, and back-end without relying on plugins, or if possible, no plugins at all. TDD approach using Jest Js.

RapidPass.ph
Requirement gathering and analyzing business requirements to assign to developers. Create a workflow for communication between Front-end Developers, Back-end Developer, UI/UX Designers, Business Analyst and Stakeholders

FPT Software Ph
Help gather & analyze business user requirements to build a cross-platform application for Android, iOS, and Windows Mobile using Ionic from scratch. Involve maintenance / development through agile software development with documentation as per described by company, client, and industrial standards. Work closely with the stakeholders to implement end-to-end solutions and coordinate and work with the project management & QA team to ensure successful delivery of the solution.

CML Mopro Philippines, Inc. — Web Builder
Build web applications from scratch for a maximum of 2 hours using Mopro Web Builder while being able to address all the requirements of the client. This involves HTML and CSS modification also.

Accenture
Remotely connect to the client's computer to provide Technical Support issues like virus removal, computer tune-up, software driver installation, program installation, and/or OS and support specialized issues like navigation of programs, data backup, customize applications, and/or Windows OS related issues.

ADVANCED WORLD SYSTEMS
The AWS Center for Technology Incubation (ACTION) Training Program is tailored to bridge the knowledge gained from the Academe with the actual needs of the global IT industry. Its focus is to develop fresh graduates (or with less than 2 years of IT experience) into AWS engineers who have balanced capability in both technical and business skills. On top of being proficient in English, Nihongo proficiency training is also provided to communicate with Japanese clients.

FREELANCE
Gather and analyze requirements from the client to create software requirement specifications and developer Website according to requirements. Integrate social website APIs for authentication and secure online payment transactions of credit cards. Review test specifications and design to ensure the relevance of design with the requirements met. Deploy the application to a server and communicate to the client for updates and testing

Projects

GEC - Confidential
June 2022 - Current
Company Name: German Emirates Club
Project Size:
Project Position: Senior Full-stack Developer
Responsibility: Build a social media website.
Project Description: C
Used Technologies: VanillaJS, Webpack

GEC – Hiring Careers Page
June 2022 - Current
Company Name: Hoody
Project Size: 6MM
Project Position: Senior Full-stack Developer
Responsibility: Build a CMS for Blog page. Deploy to server and link to Blog page
Project Description: Continue an existing project for article writers to input blog contents.
Used Technologies: VanillaJS, Webpack

GEC – Event Landing Page
June 2022 - Current
Company Name: Hoody
Project Size: 6MM
Project Position: Senior Full-stack Developer
Responsibility: Build a CMS for Blog page. Deploy to server and link to Blog page
Project Description: Continue an existing project for article writers to input blog contents.
Used Technologies: VanillaJS, Webpack

GEC – Download App Page
June 2022 - Current
Company Name: Hoody
Project Size: 6MM
Project Position: Senior Full-stack Developer
Responsibility: Build a CMS for Blog page. Deploy to server and link to Blog page
Project Description: Continue an existing project for article writers to input blog contents.
Used Technologies: VanillaJS, Webpack

IFZA Download Page
June 2022 - Current
Company Name: Hoody
Project Size: 6MM
Project Position: Senior Full-stack Developer
Responsibility: Build a CMS for Blog page. Deploy to server and link to Blog page
Project Description: Continue an existing project for article writers to input blog contents.
Used Technologies: VanillaJS, Webpack

White Reward
Company Name: Buenapublica (German Emirates Club)
Project Size: 1/2 MM
Project Position: Alone Developer
Responsibility: Build a landing page website for showcasing company.
Used Technologies: Vue

Hoody CMS
June 2022 - Current
Company Name: Hoody
Project Size: 6MM
Project Position: Senior Full-stack Developer
Responsibility: Build a CMS for Blog page. Deploy to server and link to Blog page
Project Description: Continue an existing project for article writers to input blog contents.
Used Technologies: VanillaJS, Medium Text Editor, Webpack

Hoody Blog
June 2022 – August 2022
Company Name: Hoody
Project Size: 6MM
Project Position: Senior Frontend Developer
Responsibility: Build a new designed Blog page for hoody
Project Description: Redesign Blog page
Used Technologies: VanillaJs, PugJS, HandlebarJS, Webpack

Hoody Application
December 2021 – May 2022
Company Name: Hoody
Project Size: 20MM+
Project Position: Senior Frontend Developer
Responsibility: Build frontend application for VPN-ish using Tauri – a javascript framework using Rust
Project Description: User Interface for switching VPN-ish networks
Used Technologies: VanillaJS, Tauri

Remotodojo
September 2021 – October 2022
Company Name: Remotodojo
Project Size: 4MM
Project Position: Senior Full-stack Developer
Responsibility: Build software ecosystem application for in-house blockchain
Project Description: A blockchain from scratch for a new internet. Pure privacy and censorship.
Used Technologies: VanillaJS, ChainJS (in-house framework), Rust, everything else is in-house

Crestcebu.com
June 2021 – August 2021
Company Name: Crest Forwarder Inc.

Project Size: 4MM
Project Position: Full-stack Developer
Responsibility: Build frontend application, integrate Messenger, add CMS for Blog, and Blog Page.
Project Description: Build Showcase website from scratch and deploy to server, with Facebook Messenger integration.
Used Technologies: Angular, MySQL, Express, PHP

Panteum
December 2020 – March 2021
Company Name: Panteum
Project Size: 200MM+
Project Position: Full-stack Developer
Responsibility: Build software ecosystem application for in-house blockchain
Project Description: A blockchain from scratch for a new internet. Pure privacy and censorship.
Used Technologies: VanillaJS, ChainJS (in-house framework), Rust, everything else is in-house

Classified
January 2020 –December 2020
Company Name: classified (fast food restaurant)
Project Size: 12MM
Project Position: Project Manager / Full-stack Developer / Business Analyst
Responsibility: All around manager and developer
Project Description: A mobile application for data entry to the commissary for as-is to-be business process
Used Technologies: Ionic, ExperssJs, MongooseJs, MongoDB, Github, Trello, Discord

RapidPass.ph
March 2020 - April 2020
Company Name: DCTX
Project Size: 24MM±
Project Position: Project Manager
Responsibility: Requirement gathering and analyze business requirements to assign to developers
Project Description: A special QR code that allows qualified users to get verified and pass through checkpoints
faster in the Philippines. Worked along with IATF, DICT, PNP, DILG, etc.
Used Technologies: Angular, Flutter, Java, Jenkins, MS Azure, Trello, Figma, Slack, Github, Zoom

Radio On Demand - Data Converter (IoT)
April 1, 2019 - June 28, 2019
Company Name: NEC Telecom Software Philippines, Inc.
Project Size: 12MM
Project Position: Backend Developer
Responsibility: Build a new application from scratch using mBaaS, a proprietary software by NEC
Project Description: An API endpoint to converter CSV files to Mongo Database
Used Technologies: Java, WebDAV, mBaaS, XAMPP, RoboMongo, WinSCP, SVN, Redmine

AT&T - NLU (Natural Language Understanding)
February 1, 2019 - March 29, 2019
Company Name: AT&T
Project Size: 18MM
Project Position: Frontend Developer
Responsibility: Create User Interface for Artificial Intelligence
Project Description: An AI that helps understand natural language
Used Technologies: Java, SQL, Jenkins, Kubernetes, Java Spring, Amazon S3, Angular 1, PolymerJs, jQuery

PT Risk Tool a.k.a. TAROT
March 05, 2018 - April 15, 2018
Company Name: e-on Climates and Renewables
Project Size: 16 MM

Project Position: Front-end Developer
Responsibility: Create web pages for tools. Maintain UI specs
Project Description: A tool for managing Risk and Failure Rates of Wind Turbine Generators
Used Technologies: Java, VueJs, MySQL, Jenkins, Gitlab

Error Database
June 18, 2018 - August 17, 2018
Company Name: e-on Climates and Renewables
Project Size: 2MM
Project Position: Full-stack Developer
Responsibility: Add a new feature to an existing application
Project Description: Record Wind Turbine Generator faults to Database
Used Technologies: Java, Ext.js by sencha version 4, MySQL, Jenkins, Gitlab

Data Extract Tool
March 05, 2018 - June 15, 2018
Company Name: e-on Climates and Renewables
Project Size: 6MM
Project Position: Front-end and Web-service Developer
Responsibility: Design UI/UX. Integrate Front-end with Back-end
Project Description: A web application to Extract Data from Database
Used Technologies: VueJs, ExperssJs, MySQL, Jenkins, Gitlab

Vehicle Franchising
May 01, 2018 - July 31, 2018
Company Name: LTO - Government
Project Size: 4MM
Project Position: Front-End Developer
Responsibility: Design UI/UX. Integrate Front-end with Back-end. Conceptualize the idea.
Project Description: A web application for data entry and query of registered vehicle franchising
Used Technologies: Java, VueJs, SQLite, Trello
Page 4 Confidential - Vince Banzon

StreamLine NX
February 1, 2018 - March 2, 2018
Company Name: Ricoh
Project Size: 160MM
Project Position: Tester
Responsibility: Create test cases. Testing
Project Description: A web application that communicates to a fleet of MFPs.
Used Technologies: Java, selenium, Smart GWT, Jira, Jenkins, Gitlab

Walletbook
December 1, 2017 - March 31, 2018
Company Name: Personal Project
Project Size: 1MM
Project Position: Creator and Developer
Responsibility: Create a mobile application and deploy to Google Play Store
Project Description: A phonebook for wallet addresses (public keys) in one place design for blockchain
Used Technologies: Ionic, Cordova, Local Storage, QR Code Scanner, Camera, SQLite

S&I Watson Trainer
November 24, 2017 - December 20, 2017
Company Name: S&I Co. Ltd
Project Size: 26MM

Project Position: Web Front-end Developer
Responsibility: Continue developer a Front-end application to utilize an IBM Watson API
Project Description: A web application to train IBM Watson API
Used Technologies: Angular 1, Java, IBM Watson Services, IBM Cloud Platform, Java SpringBot, PostgreSQL, CouchDB/Cloudant NoSQL DB, SVN, Jira, OAuth2.0

Mobile Site Attendance
July 24, 2017 - January 17, 2018
Company Name: e-on Climate and Renewables
Project Size: 34MM
Project Position: Mobile Developer (iOS, Android, and Windows Mobile)
Responsibility: Create a mobile application that communicates to an API, test, deploy and release the application to Google Play Store, Apple App Store, and Windows App Store
Page 5 Confidential - Vince Banzon
Project Description: Create a cross-platform mobile application for tracking scheduled check-ins of users
Used Technologies: Ionic 2, Angular 2, Typescript, Cordova, SVN, Git, Jira, and Redmine

COCAMO
May 24, 2016 - May 16, 2017
Company Name: Geek Squad
Project Size: N/A
Project Position: Remote Desktop Support Specialist
Responsibility: Support client with computer-related issues
Project Description: Remotely connect to the client's computer to support common issues like virus removal, computer tune-up, driver installation, program installation, and/or OS and support specialized issues like navigation of programs, data backup, customize applications, and/or Windows OS related issues.
Used Technologies: Geek Squad Agent Workbench, LogMeIn, Ring Central, Windows Server 2008

Study On-the-Go
January 2016 - March 2016
Company Name: Advanced World Systems Inc.
Project Size: 28 MM
Project Position: Mobile Front-end Developer
Responsibility: Create a mobile application that communicates to an API
Project Description: A cross-platform mobile application for studying Nihongo and PhilNITs for ACTION trainees
Used Technologies: Ionic 1, Angular 1, Cordova, SVN, Redmine

E-commerce Website
July 2015 - October 2015
Company Name: Classified
Project Size: 8MM
Project Position: Full-stack Web Developer
Responsibility: Gather and analyze requirements from the client
Create software requirement specifications
Developer Website according to requirements
Integrate social website APIs for authentication
Integrate secure online payment transactions of credit cards
Review test specifications and design to ensure the relevance of design with the requirements
Communicate to the client for updates and testing
Deploy the application to a server
Project Description: An e-commerce website that supports social media authentication and stripe payment
Used Technologies: Ruby on Rails, Stripe payment, PostgreSQL, Slack, Github
